

Agricultural packaging

Pegasus

Powerful and tight stretch film for bale wrapping

Compared to other animals horses are very demanding concerning the quality of their feed. Bale haylage produces high-quality feed which contains only low dust and is therefore ideal for horses.

The wrapping of horse haylage with dry and woody stalks can cause problems. Unterland Flexible Packaging therefore offers a special blown extruded 3-layer stretch film which meets these requirements: **Pegasus**, a more powerful, tougher and tighter stretchfilm compared to conventional stretchfilms.

Unterland Flexible Packaging GmbH is specialist in high class film production for packaging and offers innovative and high-quality stretch films for the wrapping of bales for the agricultural industry.

Advantages of Pegasus

- **Greater strength**

Hard stalks can penetrate the wrapping film. Pegasus is significantly stronger and can therefore bend hard stalks downwards during the wrapping process.

- **Greater resistance to penetration**

The straw stubble left in the field can puncture the film when the bales are laid on the ground. Pegasus is significantly stronger, and therefore prevents the wrapped bales from being penetrated.

- **Adheres better**

Silage bales with haylage cannot be squeezed in the usual manner, and that is why more oxygen is pressed into the bales. Pegasus adheres better which prevents additional oxygen from entering them.

- **Greater yield**

The optimized stretch performance guarantees an especially high yield.

Colours

White

Grass-green
Colour fits perfectly into the countryside.

Our tip

Don't wrap your haylage bales for horses in dark colours. The strong thermal expansion of the bales encourages the production of condensation underneath the film. The unpleasant result is mould!

Technical data

Widths	250 mm, 375 mm
Roll lengths	1.500 m
Packaging	1 roll / carton, 24 rolls / pallet
UV - resistance	12 months, 110-180 kly / years
